Problem:
The server client says that it was unable to get the server list.

Cause1: The server list is down.
Solution1: No solution. Occurs when the Server that sends the server client data is down. We have to fix that on our end.

Cause2: Your firewall is blocking the server client.
Solution2: Set your firewall to allow the frontend to communicate with the Internet.

^^^

I have the problem. I unblocked the RenX Frontend Client. Still no servers showed up. I then turned off my firewall. Still no servers show up. "We have to fix this on our end" < when is that going to be done? I would like to play this Sunday when everyone gets together to play!
