The !autoannounce command appears to be broken:

[16:54:06] 31 < Iran >   30 !autoannounce
[16:54:07] 18 < 20brenbot >   Runtime Error: Undefined subroutine &main::RandomAnnounce
called at commands.pm line 1826.

And I can't get the !auth command to work, it apparently does nothing.

I get a response for the follwing:

[17:13:47] 31 < Iran >   30 !auth
[17:13:49] 18 < 20brenbot >   Usage: !auth <user>

But trying to !auth a player in-game that's on the modlist doesn't seem to work. Am I doing
something wrong?
