Whitedragon was testing methods of blocking stuff like spoofed kill messages for his DragonGuard serverside cheat detection program all the way back in 2006 or 2007.
Spoofed kill messages etc are blocked in BIATCH as well and thus in TT as well. However, different radio commands apparently not or that got lost in porting BIATCH to TT.

Edit:
Bit lame, boasting about a piece of software that never got released. Even more so when it took us a couple of days to create the first version and within a couple of weeks we were testing it on multiple servers. Not much after that we released the first version.
