Apollo/ProjectX/whatever he calls himself was just mass-joining Jelly with IRC bots a couple of days ago, I believe he was involved with St0rm in some way or another - maybe that could be it? Or if you ask shaitan, it's probably me.

Snort is what we use on Jelly's box, and it works quite well - it could very well be that the person that is attacking you is actually exploiting a bug in the FDS to cause it to crash, and not necessarily a simple packet flood like most attacks. But I see you said that all the players just lose connection, so it probably is just a simple DoS or DDoS attack. Do the Snort logs indicate anything?
