omgitsgunz wrote on Mon, 29 October 2012 18:25 That is truly the most idiotic advice I've ever heard. If my mouse works outside of the game, and IN the game PRE-update, it's not my computer, it's not my mouse. It's something about the game.

Then by reinstalling it, your eliminating the option that its the game (if it continues to not work after you reinstall) - then the TT team can look into it further - have you got the latest software/updates/drivers for your mouse/keyboard?
