This is the Renegade MP demo v1.05 EXE hacked to remove the "gameplay pending" and to allow you to select and use maps other than C&C_Under. There are the following bugs:

1. When joining a server the name shown under the "Host:" info is your name instead of the owner's name. I had to break this to get joining servers running maps other than C&C_Under working.
2. Map looping is always enabled.
3. If you join a server and the map ends later on, your game will reload the current map instead of the next map. This causes your client to desync with the server if the next map isn't the same as the current map. This is because the MP demo doesn't send the next map info over the network, it always uses C&C_Under.

You need to have the MP demo v1.05 installed to use this exe. You can download the v1.05 demo here:
