The teleport script's or jump scripts arent good for MP...if two idiots happen to jump into the zone at the same time they will be stuck....unless with the jump script can you make a large enough zone where it just teleports you up depending on where you are in the zone?

Also does it teleport you right thru walls?

and is it possible to make a script move you on the x or y axis...Im no scripter but can someone write a script like that so i can make speed bursts around the a race track
