---

it crashed on loading an lvl file.

Before you ask:

I have tried the updated 4.1 rc3 of both the client download and the mod tools download. (and every logical combination with them.)

I fixed the registry ren install path

I reinstalled ren from disk, then did all that again. (more than once)

does this narrow it down a bit?

Btw, PLEASE allow for it to read from current temps to save the current work to the map before only reading from the map. Do the stock map .lvl files have presets in it?
