I just run a budget gaming laptop, 15.1" 1080p 60FPS screen, the resolution I run on for renegade is quite low as I find reading the HUD pretty important. anywhere between 1280x720 and 1600x900. But i've been experimenting with the new render scales on 1920x1080. With the new scripts out I'll try that again and see if the fonts become more readable!
