Recently got back into renegade after like 12 years, trying to remember how to bind a key in keys.cfg for the special taunts that aren't default in the config.

The taunts that you can type into chat and they perform, vloktbogy and taunt0. I remember back in the day that you can bind these in keys.cfg

I think there is topics about this on MPF forums, but i cannot register there because their email system seems to be broken for sending a verification email and I cannot view topics if I'm not registered

Thanks for any help
