It's not rocket science...

To play on a server running the new 3.0 Anti-Cheat Mod, download AC3, extract the .pkg into your Renegade/Data directory. Now you can join Servers running the AC3 Mod.

The Mod just restores CnC Mode, in effect blocks BH and the object.ddb file..

Server owners, for more information check our site...

Ya, the readme is limited, however mirror this for download on your own servers, don't be a leach. Teach your ppl.

If you don't like it, don't trust it, or don't care, cry me a river elsewhere, lol. If you find BlazeDragon missed something, please post him.

Let us see your effort...
