Subject: LFDS Wrapper Password Problem

Hi! I have successfully setup and gotten the LFDS to run under Redhat 9. I have downloaded the telnet wrapper software, and gotten it to successfully startup. After it starts, it fires up the LFDS, as it should. . . all seems well. I then telnet to it and get it's message saying to input my password. . . and that's where the problem is: no matter what password I put in from the server.ini file, the wrapper always tells me it's the wrong one. I've tried using what I set RemoteAdminPassword to, as well as every other password in the file. . . no luck on any of them. Is there something obvious I'm missing?

Here's my server.ini file, sans commens:
Quote:[Server]
Config = svrcfg_cnc.ini
GameType = GameSpy
Nickname = WESTWOOD
Password = WESTWOOD
Serial = WESTWOOD
LoginServer =
Port = 0
GameSpyGamePort = 4848
GameSpyQueryPort = 23500
BandwidthUp = 4000000
NetUpdateRate = 10
AllowRemoteAdmin = true
RemoteAdminPassword=westwood
RemoteAdminPort = 5555

Any help would be appreciated, thanks!
