RenxI thought this map was suppost to be for RenAlert? Or was that a different one?

That's a different one.

Titan1x77everyone for some reason or another doesnt get the other zip installed or the server doesnt

anychance you can just make the .mix a little bit bigger so they work?

Hmm, I have been thinking of doing that. I originally seperated the .mix files so I could update them easier. However I've come to the conclusion the exploding buildings just need one last overhaul for me to call them done. If I focus on just them for a week or so I could probably get it done. Then there wouldn't be a need to seperate the files. I probably could also fix up the alternate models and avoid seperating those as well.

Looks like the map is going to be delayed a little, but it'll probably be for the best.
