BlazerDamn Sun servers. We have a Sun Enterprise-4000 at work that has 8 250Mhz CPUS in it.
I looked into upgrading it and to upgrade it to 400Mhz processors costs like $1350.00 per
processor...OUCH.

Expensive... but reliable as all hell too... the company that my father works at has a Sun server
that pretty much runs everything. They once had it up and running and didn't require a reboot for
370+ days and the only reason they had to reboot it was because they were upgrading it. I wish
my W2k machine would do that!
