General HavocThey won't be any different for me. It takes around 6 seconds to load up a map if Renegade hasn't loaded before. Any map loaded thereafter loads in less than 2 seconds. But it used to take much longer, since I installed my an extra 512MB of ram it has always loaded that fast.

Great job though if it loads fast on slower system.

Your loss... I have an AMD Athlon 2400+ and a gig of DDR RAM... I thought my maps loaded "fast enough" too until I tried these.
