alright been reading all the semi relating topics here such as the gamplay pending disconnects at 11.5 mins etc this is diffrent.

any game on GSA WOL load up play fine load next level somtime during the begining of the 2nd level I get booted out. without any message error or anything as if I had pressed esc clicked quit... clean exit nothing wierd no error messages in game or in windows.

I tried closing all programs /applications in windows I tried reinstalling renegade first with a backup of the data folder the next time without it. rebooted hundreds of times tried 3 diffrent antivirus scans online and on computer 2 spyware sweeps and a disk defragmentation. I downloaded service pack 4 for windows 2000 so that i could install the altest ATI graphics card drivers... im at a loss... i tried hosting my own game online jsut 1 player and it worked fine. the only thing i havnt tried that I thought of was a reformating/reinstalling windows.
