Subject: Say bye to ads...
Posted by IRON FART on Fri, 23 Jan 2004 03:26:00 GMT

Many of you will probably know of this, but if you don't or havn't done it yet, do it now!

http://www.ecst.csuchico.edu/~atman/spam/adblock.shtml

Do what it says untill the end of that long list of ad servers. And then add these ones:

```
127.0.0.1      download.abetterinternet.com
127.0.0.1      dst.trafficsyndicate.com
127.0.0.1      view.atdmt.com
127.0.0.1      adfarm.mediaplex.com
127.0.0.1      xlime.offeroptimizer.com
127.0.0.1      xadso.offeroptimizer.com
127.0.0.1      cdn2.adsdk.com
```

And many places you go on the internet, you will not see ads.

127.0.0.1 is simply referring to your computer (redirects you to your own computer) So if you are hosting a website, in some ad spaces you will see your site.

To add your own, type 127.0.0.1 then 7 spaces, then the ad server.]

Popups just become less annoying and flashing banners won't make you blind

Also be sure to read the section: "Enhanced Privacy"

I have used the Hosts file for a long time, but never saw such a complete list.
