Is it possible for the LFDS too work in a cluster?

Exampel.

3 computers share all of their "computer power" and handle all the workload to host 1 renegade server.

I know one guy did this back in renegade demo 1 year ago and he were using Windows 2000 server to host a none laggy 40 player server.
Think the server name was: War in bosnia

Could this work for the LFDS also?
