Well, I guess I could post the specs of my desktop and laptop.

Desktop:

AMD Athlon XP 2100+ (1.73 GHz)
1024 MB DDR 2700 RAM
30 GB HD - For Windows. I now have a redundant 120 GB SATA drive because my Asus A78NX
Delux is a hunk of shite with it's shit SATA controller that causes corruption problems.
80 GB HD - For storing all my files, MP3s and all the crap downloaded from the net.
Radeon 9700 Pro 128 MB - Nice and fast, but seems to fuck up when I play the Far Cry demo.
Sound Blaster Live - Can't remeber anything else about it, also have an on-board soundcard.
TV Card
IDE Exspansion card
CD/RW 52x/48x/52x
DVD-ROM 16x/40x
CD-ROM 56x

Laptop

AMD Athlon 2400+ XP-M
256 MB DDR 266 - Really need another stick of 256 MB.
30 GB HD
ATI Mobile graphics thing - Uses shared memory.
CD-RW/DVD Combo drive - Not sure of the speed.
