gibberishJason8765its C#....and messy lol

Its Java, and if you are able to crack an encryption similar to RenRem's without any spec's, and without decompiling the original program, you might be in a position to criticize the quality of the code.

Even then I think it is more than a little rude to criticize someone when they give you something for free.

it wasnt given to me and i wasnt criticizing, note the wink ()
i beleive its called joking or been sarcastic
and lol it looked a bit like c#, anyways lol u were right silly me lol
