Subject: Porting the Java
Posted by SwissNic on Fri, 19 Mar 2004 08:19:46 GMT

Hi,

I have been trying to port the Java Encrypt/Decrypt code to VB.Net, but as I dont know Java from Prolog - its a bit fun!

Most of it is readable, but I am lost on a couple of lines of syntax:

result[4] = (byte) (reply ? 1 : 0)

What does the Reply boolean do in the En/Decrypt functions? I know I'm probably really stupid, but HELP!!!!

))))

Cheers,

SwissNic.
