All I have is a question...

I thought the MAD tank was only good for was for squashing infantry. I bought one of those a long time ago and to the best of my knowledge, all it did was run over enemies.

I haven't looked to far into this vehicle because I thought it to be useless unless there's a strategy I don't know about.

PS: I remember it being slow as a snail though.

[EDIT]

How big is it compared to...let say...a mammoth tank? Just curious... :rolleyes:
