Well i was gamespy lobby (renegade-guardtower) and it seems everyone its out testing the cheats. Seems that there's a way to make the cheats work (final renegade, bighead). [gse]mrpirate and [era]griffen did it themselves just for testing and they found a way around it.

Hope they get in touch witch crimsom or any of the renguard team to try and patch w/e is fuked. Meanwhile i'm still happy that its at least now HARDER for noobs to cheat.

Good luck getting everything right.

ps Dont waste your time "certifying" all these w3d skins that are "valid" or w/e just concentrate on blocking the real strong cheats. I could live without using any w3d files so as long as cheats dont work.
