I'd like to run my server without Renguard. Though I can see BRenBot connecting to the main Renguard server when it loads. I have these settings in my renguard.cfg file, so I thought it would have it disabled, or can it not be disabled at all in this version?

renguard config file

Pure Mode - Disallows any clients with model textures (skins) and alternative weapon models. 1 = enable, 0 = disable.

Pure_Mode = 0

Server Motd ID - your motd id, as assigned on the Server Motd Configuration on renguard.com (nummeric)
0 if you do not have a motd.

motd = 0

how to notify non renguard users. available options: msg , page, off
page is WOL only. if you disable it, it will only do the kick message.
be sure to put it into your motd then

notify = msg
