There's a slight problem with KazaaLite, the guy who made Kazaa has screwed KL out ofthe fast track network because of copyright issues... *cough* fucking hypocrite *cough*. This means that KL can't get files from Kazaa, Morpheus, eDonkey, and eMule users anymore.

BTW, you can't actually be caught downloading afaik, you can only be caught uploading.

If your going to use BitTorrent get the Tornado Torrent/Shadow's Experimental client, but you'll have to do some port-forwarding if your working behind a firewall.
