MS-Dos mode is the best. if you have an OS without make a Boot disk,
If you use Win98 or something with MS-Dos mode exit Windows and select "restaerts in Dos Mode"

then type in:

```
scandisk c: /surface /autofix /nosummary
```

you can also use /all if I remind right to test all you HD's

This apramert tell Scandisk: Autofix erros, make no summary test the surface (intensive mode)

-> every one who wanna learn something about MS-Dos can ask me, I ahve worked with MS-Dos long tima at my 286 until I get an PII300

and btw: Defrag normaly should not work under Winsystems (exerpt Win 3.1/Win95 old versions) or if you copy it from an old MS-Dos instalation.
