I had a homepage i couldnt get away for some effing time not to mention phoneweb jacked my toolbar .....

Do you know what i did?

Open CWshredder and delete Everything that starts with 01 ,02 ect... If your IE fucked up reinstall it.(not like all will be lost if you do this) Thats how I get ride of those seeminglly impossible hi-jacks   Kinda a risk though lol.   If you dont want to do it my way go here http://forums.spywareinfo.com/ and ask the pro's.   It also helps to not vist sites you dont trust ex: Porn and warez sites.   Also get firefox , IE sucks, http://www.mozilla.org/products/firefox/.
