I'm just looking for an update to wether or not this problem has been fixed or not. Or if you haven't had the time to sift through the code to find an error.

I still see this error on a daily basis on most servers that use BRenBot. It would be nice if the system worked properly so that the point of having a recommended player gets the notice they deserve.

I often get my recs stolen away from me, though an extra thing I have noticed if you get all of them it gives them all to you, this is based on that if you were to just get one or two it would give it to the second top placing player in that catergory.

Good luck Blazer
