ApacheI never bothered to reinstall it after I reformatted a week or two ago...

I'm runnin a 17" LCD as my primary, and a CRT at 1024 x 768 as my secondary monitor to the right, I love the dual background option, along with the task bar at the bottom of the secondary monitor. I usually use the second monitor for music and IRC, with my primary for surfin the web and for MSN.

You took the words out of my mouth

I love the second taskbar, I have it set up to mirror applications. The best features I would say are the extra buttons on the Title bar.

oh btw I run a 17" Samsung CRT as main and a 15" IBM CRT as secondary.
