Yeah right, Alkaline, he's going to go from the GeForce4 MX 420 to the Radeon X800 XT, the world's fastest (macci got 16k in 3DMark 2003 with one) video card, which was originally going for \$820 USD in Japan--it's now \$450. That's definitely realistic. His CPU is the big bottleneck anyway.

EDIT: Oh, I know, he can get a Pentium 4 3.4 GHz Extreme Edition! Those are cheap, right? Only \$1000!
