Had to screw around a lot to figure out what it was hitting on...not sure where or how I got these files, but I am assuming from a map download...I'll look latter.... .tga files...pretty harmless I think....

But since I only every downloaded one skin (blue shimmer SBH) and maps I think it was attached to a map I have...will try to figure out which, but here are the files I deleted to get renguard to accept my puter...

I think maybe they are from really old map's from long ago...files are almost two years old so may be early mapmakers...but if ya have the time...

So you know what they are? Or is this just a default answer?

I'm not exactly sure what they are, but, it won't do any harm to remove them as they all seem to be in the always.dat.
