I've got a problem with configuring Brenbot-135 for linux. When I start it i get this error:
BotMode must be either LFDS or WIN32!
This is what i have in mij brenbot.cfg:
BotMode = LFDS

i've also tried:
BotMode = "LFDS"
BotMode = lfds
BotMode = "lfds"

btw i don't have RedHat, i've got Debian 2.4, but the renegade server works well on it, i'm using
the server for RedHat 7.3

I hope someone can help me

dos2unix brenbot.cfg

it may not have any windows linefeeds.

I'm the friend gohla is talking about, and i fixed it using dos2unix. Thnx for the help

But now there is another problem, i get this:
Starting up renrem thread...
BRenBot 1.35 linux.
brenbot is Copyright 2003-2004 by Blackhand Studios. All Rights reserved.

Its a bug for Win32 and Linux. Our clan is having some problems with the bot crashing after it produces this error, a fix would be nice...
