Hello all

First thank you crimson on the fast reply for the past question i posted. Thanx also to every one who replied.

I installed BR and all is well with BR and IRC; they are connecting fine; i also downloaded the dedicated server (The FDS one); one question though. To join my game on that dedicated server what do i do exactly; do i run renegade first; then the server and then the BR (with irc) or do i have to join from irc it self (if so how please). I know these questions may sound Noobish to you guys; but i never did this before and i really want to add a server for people to play. By the way can i run a server and play the game from one computer ?(this question relates to the above too) thank you very much for your time.

If its on WOL or GAMESPY or LAN do this

1. Run your renegade and get it to connect to where the server is
2. Run the dedicated server, after running ren or you will not be able to run ren
3. Start BR|Brenbot
4. Wait for the server map to load then you can join the game.
