I came across this awesome little tool for registering with WOL. No more need for searching for the right link, or even needing to register a valid email(like anyone follows the 4 nicks only rule anyway).

Get it here

Other people should host it to, that's just a link to an attachment on our forums..

Maybe a link to it should be stickied?

That was made by "ApaxTeam" therefore something is dodgy about it. They always include backdoors or send the information you put in it in all their programs.

Yeah Matt...well it did come from a hack site :S

The link came up in a google search, i was searching for a page to register nicks with WOL, and I found this. This is why I uploaded it the renalert site, instead of the original link....since there was shitloads of cheats there... :/

I *think* this utility is clean. It was ripped out of the GU relay.

Just use the link to the register applet on the decrepit old Renegade html pages... that's what I do

searching for the right link?

Start->Programs->Westwood->Shared Internet Components->Register

Actually, that has been in numerous wol relay's for quite awhile (GU/Donutman actually stole the original source and claimed it as his own, weird eh?). There was also a glitch a long time back that would allow you to register with symbols in your name as well, but it was fixed rather quickly =(

And uh, can't you just register names through the game application anyways?

Well, it wasn't attempting to access the internet, because if it was, I would've blocked the connection via firewall before it connected.

As Jason mentioned, why can't you just use the app that came shipped with the game?

C:\Westwood\Renegade\Register.exe

This is faster, and doesn't require me to keep making new emails in order to register names...

RenxThis is faster, and doesn't require me to keep making new emails in order to register names...

You dont actually have to make new emails ...

You can enter a fake email and it still registers ...
