Ive got an edited version i made and the regular version. If i name the map C&C_M01 then other people would have to download it so i changed its name to M01 and changed the real M01 to something else. But when i edit the scrvg_cnc to play it and all it still comes up with the original map and not my edited version. Anyone know how to change that?

Uhh, your post is very confusing. Why would you rename your map to M01 and overwrite that mission? You should just name your map "C&C_DudesMap" or something, than have them download it. As for the scvg_cnc, I have no idea why your messing with that for a multiplayer map.

Im not overriting it. Im changing the original maps name and then making the edited version as M01. Its a single player map not a regular one so im trying to make it so other people don't have to download it (ive seen it done online). as for scrvd_cnc. I dont think you can start the rotation without editing it after youve started a map already.

He means server sided maps... Something i wan't to know things about for sometime now...

But people don't seem to like giving info on it... :rolleyes:

What ever you are doing, i don't think the "scrvd_cnc" has any use...

there are many reasons why the info is very rare....

I know how to do it though   but i have been told to keep my mouth shut so i will
