I run a FDS that I had downloaded from cnc-source.com. Anyway, it came with a BrenBot in it. Now I installed it and the FDS runs great, but the BrenBot is a total pain to set up. For one, someone who runs a BrenBot and that has it up and working needs to come out with a Written tutorial in their own words. Step by step on how to set up the BrenBot. Now seeing that it works with Renguard I want to be able to do stuff like !setjoin and have people do the !rules and I want my BrenBot to respond. All I ask is that someone comes out with a complete written tutorial for download. Afterall, Renguard made the BrenBot, they now need to make a tutorial.
