I had a few probs awhile ago with renguard not working very well on my machine so I tryed to repair it and it wouldnt. So I then unistalled it and now i cant play the game or reinstall it i am having to reinstall the whole game. I deleted all the important files for renegade to work

Has this been brought up before?? Sorry i didnt have time to search for the answer :rolleyes:

Can anyone help me as it keeps on doing this i have the game disc in the drive and it plays ok. But soon as i install renguard all hell breaks loose and i lose my stuff! :twisted:

theres this thing called the edit button

bacup all your maps & skins, then reinstall Renegade, then update to the latest version via auto update then install RenGuard

RenGuard doesn't delete files.
