I got RG installed and played on this servers very orten.
Now I get kicked out, because of NOT using Renguard.
Surely not true because I lock in ba RG!

Istalled-->Renegade-->Patch 1.037-->Smith Reticle-->CorePatch-->Renguard-->Any Idea? It
sucks so badly to play on a server without >RG

Any idea? Was looking forward the whole day to play and than THIS....

Was this the first time you signed in with Renguard? If so, Renguard doesn't recognize you. You should see a "welcome <nick>" when you forst sign in. If that nick isn't there, the server can't tell if you are running te program.

I think its Renguard then CP1,
Can't be sure on that though

I was playing with Renguard since it came out.

Installed an older Grahpics card driver yesterday, because I thought it would work better with my old card (Leadtek 4600Ti, 43.45))
You are right, RG didn't give me any welcome, but it installed cp1 via RG again(online).
cp1.

I can play on all (at least all they get me a chance to see) USA Servers, but I think RG servers are allready filtered out, in my case.

Server is sayin, "blala is not using RG, he might cheat "

I think it must be a thing , of instal...

Everything works(I play on All seeing eye servers normally).

I just cannot understand, why I lock in with RG into the Game and then somebody tells me: You are not usin RG!

I know, that RG makes an Game2.exe, but it does not work at all.

I am not happy with it, but I know for sure that this is an installation prob.
So you would help to tell me which thing you installed, one after the other....

Thanks...

You're supposed to install RG first, update to 1.03, then install CP1. Try that

Will give it a try....

G'Day, will report-back...

edit:so I had to play on no RG protected server: wasn't so bad as I would have imagined!

Thanks, works now fine again.
Just changed the sequence and installed CP last.

Had a couple of beers that night, maybe it had something to do with the problem..... :rolleyes:

Stuck on it again....

Any suggestions please!

How can I log again "in" Renguard?

That seems to be my problem.....

Log into WOL. Open game2.exe and log in to WOL, close Renegade, and open up the game.exe. It should then recognize you.

Strange, but that seems to work.

thanks...
