I host a 10 player renguard server thats open 24/7 but the problem is when i join it via wol it doesnt detect me on renguard. But for some strange reason when i hosted it via gamespy (when wol was down) and joined it it detected me on renguard. Pretty weird but this is a problem because if i host clanwars etc.. on it when i join it via wol it says im not on rg so as you can imagine cheat accusations fly etc...

Is there any way to fix it so that when i join it via wol it detects me on renguard? If there isnt a way is there a way to configure the ssc_ignore.txt so i can go around this problem.

Thank you for your time.
