[13] Trying to connect to server #1...Connected
[13] Secure link established.
[13] RenGuard is attempting to auto update itself.. Please hold.
[13] If you have trouble with this auto update process, please go to http://www.renguard.com and download the new version from there..

then it freezes

i follow this installation route

1 install renegade
2 install patch 1.037
3 install renguard
4 install core patch 1
4 instal maps from unrules.com

then this auto update comes up and that freezes and if i say renegade(left button) this comes

In Renegade is een fout opgetreden en moet worden afgesloten. Onze excuses voor dit ongemak.
in english:
in rengarde a error occuried the program will now be terminated.

Also it asks to send a error report to windows.

And at renguard.com i cannot seem to find a manual patch

Also i do not have any virus or spyware progr on and i only have a firewall on my modem, which i can set off, but then i am very unprotected

i also found out the error occures in game2.exe
(maybe that will help)
(replacing the file with another game2.exe doesn't work)

Why are you trying to install a previous RenGuard Version?

The only availalbe version from http://www.renguard.com is 1.03, and it does not auto update itself, unless you have a virus or some other weird thing going on.

i know, i download it from there, but it still happens also after a short time i cannot activate it to uninstal so i need to download it again, and if it is a virus i cannot detect it

i downloaded the renguard today, and i got this message.
Also if i do not install the patch 1.037, but download it in renegade itself i get that message, i get that download wenn i want to enter my name, but if the patch of 1.037 is installed it doesn't ask for it.

but if i follow this route of install renguard freezes

1 install renegade
2 install renguard

so no offence or something, but is it possible that at http://www.renguard.com
it isn't version 1.3

Also if someone has a working renguard and 1.037 patch, maybe he could give me those and i will reinstall.

ATM i can play renegade now with that game2.exe file i placed, but i still get a error message and i am not shown as a renguard-user

Yes, the 1.03 download has been there for like 8-9 months now and it's been wrong this whole time? I doubt it.

i followed all the steps from above(first topic)

i can play the first time with no problems but a few hours later wenn i was offline and get back on it happens. I know that people sometimes hack sites, so i thought maybe someone changed something on the site or a error onces happened and the site was reset to previous settings, or i am hacked, but i have no clue what to do whatsover

Maybe you tried when RG network was temporaraly down?

Just download the latest version from www.renguard.com and install it....

NOTE: You must install renegade 1.037 patch BEFORE renguard, download your language of the patch from ftp://ftp.westwood.com/pub/renegade/updates

I wonder if BHS could somehow have RG 1.04 install check for 1.037 and point people to that ftp folder if they dont have it...would stop a lot of problems people are having...

I installed the 1.037 patch before installing rg so it rules out that situation. There has to be something else (im guessing its the server or client part).

i had it but i forgot about it when i didnt play for a month, then i wen tback to it and it was fixed lol
raises eyebrows though.

i wonder if there is a virus / spyware out there that makes RG connect to someone elses fake rg
server and download stuff to your computer, because I dont see any other reason RG would be
trying to update itself to a non-existant version
