Is there now a script that allows for all players to be on one team?

I was on WOL for a while a little while ago and I joined a server using the Single Player levels (nothing new) but it was able to run with everyone on GDI, I am wondering how this was accomplished.

What other team modifications are now possible?

bots are not counted as players by WOL, the problem is getting out of 'Gameplay Pending' with players only on one team..

It is some sort of scripting, but I haven't found anywhere to download it or even anyone taking credit for creating it.

The levels that exist are only tons of re-spawning bots, I would like to make it a bit more interesting by having a defined progress, so its a actually mutiplayer co-op.

coop runs on a modded server.dat which allows everyone to be on 1 team. It's not public as far as i know. And only a limited # of people have it, I only know 5 people/servers that have it, but then again I don't know that many ppl.

ok heres what to do:

note: first backup server.dat

- 1) W32Dasm (deassemble server.dat), find the locations of the decisions ("Gameplay Pending")
- 2) HIEW it (hex editor + debugger), use the debugger view and change the location to the ones found from above
- 3) Change the 'je' or 'jl' to 'jne' or 'jae' for each desition

EDIT: pr download and read this..

I'm making a map which would benefit alot from this edited server.dat file if someone could provide it (as i'm not much of a programmer), It would be of a great help!

I assume this would only work on a FDS?
