which windows version are you using?

renegade disappears because for some reason it failed to load...thats also why its not in task manager.

Try updating to the latest Direct X version and also post here any changes you might have made to stop it working (if it was working before)

Well it worked fine for 2 1/2 years and I'm not sure what could have caused it.

Have you made any recent changes to your computer? installed new hardware, etc?

Not sure if this is what you were talking about. Sometimes renegade will not show in the process list or taskbar but ALT + Tab into and out of the game. It may appear there else its a problem with the loader.

very doubtful this will fix the problem....but it's worth a try....

http://www.beaconpedestal.com/noCD

the reason I don't think it will, is because I know of the problem and have had it. the problem isn't with the CD, it's a problem with something the game.exe is doing with relation to the rest of your computer settings, i.e. your directX or vid card drivers. you need to tell us what happened from between the last time it worked and since that.

It says the same exact thing before.I did what you said,unchecked the box,pressed ok,and as usual said

The procedure point
?Detect_Bandwith@@YAKKKHAAHAAKPAUtBandtestSettingsStruct@@PAS>@Z could not be located in the dyanmic link library BandTest.dll.

Do you happen to have Windows Xp Home, if you do, try downloading windows updates, i know when you first install home, no programs really work until you download updates.
