With so little information (no screenshots, IP addresses, servername, etc), theres not much we can do to act on this report. If we had a nickle for everytime someone said they bypassed renguard and it was proven that they did not, we would be rich.

That IP has never been on RenGuard either. I am fairly confident that getting the bot to think you're on RG when you're not is extraordinarily unlikely, especially given the circumstances. I'm not trying to dismiss your accusation. I think given BRenbot thought he was on RG that mac may need to address this.

I miss him threatening to ddos our servers because we posted a conversation where he admitted to cheating. I also miss him bragging about being the best 1v1 player on Field despite his 0-15 record against me, and his constant cheating accusations every time he gets headshot. Oh, and his death threats he makes to teenagers (being in his forties himself) every time he loses an argument about a computer game, I miss those as well.

The best part about him was that his servers sucked (I get a lower ping when I host on a 36.6 modem), he had no idea wtf he was doing and he charged way to much for it. But anyways, whats wrong with threatening kids half your age over a computer game?

I DO NOT DOUBT that that would be possible without the use of bigheads (4-5 HS from a TFG = 1 kill) RFSoviet (WHO DOES NOT HACK, ty) has told similar stories.

Ill try my best to find the irc log for this
