sorry but i really dont feel like typing this so hold on i have half of it on my pda i have it running on it too

also you can run win32 fds on mac due to a wonderful program called  
<http://www.macwindows.com/> im not sure if thats right though

not sure if thats right eathier but ya

<http://www.tldp.org/HOWTO/Linux+Windows-HOWTO/>

What I'd LIKE to see is somebody (Silent Kane, this sounds like a job for you...) reverse-engineer the WOL protocol and then build a WOL SSC that a) runs on Linux and b) is a seperate executable from the FDS. (Think WOLSpy, just for Linux and in reverse).

There is no need to reverse-engineer the FDS code.

WOL works like an irc server (with some modifications),

The problem is that no one wants to make it

ur tarded nopic... 'nuff said if thats what i think it is...

might as well use wine to run a regular fds but i didnt click the links so dont listen to me
