A disk is not square, it simply has a square case.

CD's do not have a case because they are strong enough to support themselves.

Try this:

Get an old disk, open the protective case, and see how fragile the data pat of the disk is.

A compact disc is disc shaped because if it was not, it would not be a compact disc.

TOPIC HIJACK!

This topic is now about braces.

I got my braces taken off last year and now I only have to wear retainers at night.

You?

da\_bitch, which has more surface area, a round object with a diameter of 4in, or a square with a diameter of 4in? And wouldn't that explain why disks are round? A HDD has several round disks located inside of it, FYI.

Reminds me of when a filling in one of my teeth fell out... My family didn't have insurance at the time so I it got bigger and bigger until the hole got through my tooth and my gums were exposed. It's a pain trying to eat food only on one side of my mouth, and If I didn't the pain was unbearable. God, bad memories.

Get it checked out, not at the dentist's office though... >.>

Actually, no.. it wouldn't explain it.. because a 4x4 square has more surface area than a 4d circle. Only a fraction of the actual surface area is used on a typical compact disc; surface area doesn't have anything to do with it. If you simply close your eyes and imagine it spinning around in your drive, which parts of the 4x4 square would be completely worthless? --- the parts outside the 4d circle.

It was simply the easiest way to read media with an input which only has to move on one axis.

I don't believe in dentists, myself. For a long while, I didn't brush my teeth at all. My teeth were strong as ever, even though they were supposedly being continually racked with all sorts of plaque, bacteria, etc. In fact, the only real reasons I started brushing my teeth are the fact that every once in a while, I do like my breath not to smell like sulfur and burnt matches, and in addition to that, I've been having recurring nightmares about my teeth just. . .falling out. All of a sudden. It creeps me out. But I digress. . .

The reason I don't believe in dentists is that every time my mom went to one, they always, always found something wrong with her teeth. She now wears dentures because doctors said her gums were diseased and whatnot. I bet if she went back now'a days, they'd find something wrong with her freaking dentures. It's insane!

I had braces, but now they're out, and because I didn't dilligently wear my retainers, I'm probably going to realign my teeth. This time it won't be metal braces, though. I'll probably get invisalign.
