Remove your old installation of renguard first, and then reinstall.

You had it installed before and the installer recognizes that.

Check C:\Westwood\Renegade and see if it contains any files and check for a file called game.exe

If you are unsure post a screenshot of the directory and we can have a look.

You should also delete any *other* big beacons, big c4, big heads, and anything else big which you might have...

When I finish install it and update core patch 1, then I try to play that in Renegade Community Server#1, When I Press Renegade

try to go in the game, the server send a message that i need to install RenGuard. But I have install it, isn't? Why the server kick me? Please help me to slove the problem, i want to play in that server. Thanks~

Can you not read?

You were disconnected from RenGuard (and thus, the server tells you to install RenGuard) for having an illegal "game2.exe". Game2.exe is your C&C Renegade executable. Reinstall C&C Renegade and do NOT install your hacked version of C&C Renegade. If you need a no-CD patch, then be absolutely sure that you use this one!

Download http://www.multiplayermaps.net/pafiledb.php?action=download& amp;id=332 and run the file. This will replace the corrupted game2.exe - If you dont have anything else wrong you should be able to play.

While we are on the topic of No-CD patches, could someone tell me if the one from MultiPlayerMaps is the same No-CD as the one that =HT= hosts on their website (www.HazTeam.net)? I use the one from the HT website and it works fine with RG (I have NEVER had RG trouble due to the No-CD patch...)

They are not.
