120-200 on a local server like n00bstories. It's Arizonian, like me. I've finally found a reason to stay in this miserable state. T_T

lol do you think Crimson host the server out of her house?

[View Forum Message](#) <> [Reply to Message](#)

I thought she did, yes. I could very well be wrong. If it's some place half-way across the country, that might explain why I get 120-200 on n00bstories, but managed 100-120 on another server. Hm.

Between 40 and 250, depending on the location of the server. Or 0 if i host myself

I was born there.

My fps is typically 60, and never usually drops below that. The ping is usually from 80-150

[View Forum Message](#) <> [Reply to Message](#)

My FPS is usually 75, but my ping seems to spike lately around 180-250... Bit laggy.

Subject: Re: Your pings??

Ping is to do with your connection and modem etc.

FPS is to do with system specs, basically whether your system can handle it efficiently.

[View Forum Message](#) <> [Reply to Message](#)

I have a good connection, but the ping is bad.
My graphic card and my system 256 mbram is very bad.
My fps is normal 28 and if its action in game its 0-16 >.<

My ping generally stays around 180 or 200. My FPS however, is 30-40 on average, and it drops frequently.

AADude7 wrote on Mon, 03 October 2005 21:10My pings are usually 60 - 180
(I got cable)LOL, this says nothing. better tell us your ping when pinging a website. Because in Germany, we have different Situations=

Most of all got ADSL, a few got Cable in various speeds and we have some testing projects with ADSL2+ (16Mbits, 25Mbits are still possible). We have also some 56K and 64K ISDN Users too, but they aren't worth talking about. The DSL speeds are enough to play Rene (from 1000/128 up to 6000/640), but I must add that people must pay Money to some ISPs for Fastpath. For example, my ISP is ARCOR and I have FP without paying an extra fee. The biggest ISP, the T-ONLINE (belongs to the german T-COM -you may know them as T-MOBILE in the states) requires 1 Euro every month for FP...Not every Gamer has it.

So if people check the ping by pinging a website via DOSbox, the result ist at ~40-70 without and at ~11-20 with FP.

PING=

The annoying thing for me as a german is: When I play on german servers with good connections, my Ping is 50-120. When I play on servers located in UK, Netherlands or some other EU countries, the Ping is 80-200. Now the worst situation is when I play on servers hosted in the USA. Ping is NEVER under 170 and on the crappy Adadserv , i got 500 one time.

I laughed my ass off once I was on the MP Turbo-AOW: There is an autoannounce written which

goes like this: 'Server 3,2Ghz...2GB Ram.....100Mbit Uplink, so lag=you' ROFL, all MP servers are slightly lagging for me (too much scripts? Dont forget that a server shares the 100Mbit uplink with other servers in the datacenter) , the best Ping of all servers from WOL US has XPHAZE. But I can play on the most servers, even on Non00bs when it's full. My favourite is Unrules -Newmaps, because the poor european gamers don't wanna play Fanmaps. No clue why, but it's a fact.

Anyone got an Idea why we europeans got horrible Pings on US servers? Germany has rockstable backbones, it's not our fault...

FPS=

My comp: AthlonXP 3200+ @2,5Ghz / 1GB Ram and a Geforce 6800

My avg FPS is 55-60, on empty servers 75. I'm limited to 75 because I got a BenQ TFT and have turned Vsync on. When it comes to massive rushes on Non00bs when it's full with 50 players, my FPS drops to 40. I would never buy a 6800 again, my previous 6600GT was way faster. But the 6600Gt was noisy, so I bought this 6800 with Heatpipe cooling...

IT'S THE TRANSATLANTIC CABLE M8! The Trans-Atlantic data pipe has a very high BDP = LAG. Example from Halo: I ping 67-100 to most US datacenter servers...However, I run 167-200 to the WNX UK Halo servers and even higher to servers in continental Europe

@HT Bird

No it's not the transatlantic cable. When I play Wolfenstein ET or just good old MOHAA on servers hosted in the states, my Ping is way lower than in Renegade. Anyways I don't know why rene has some high Pings (Whats the problem of only a few thousands of kilometers), but like I wrote I can play on most of those servers.

When I used to play Renegade my pings were usually ranging from 80 to 180. That was when I had 3mb down and 256k up. I now have 4mb down and 384k up. I have not tried Renegade since that upgrade in my connection.

My FPS in Renegade is usually in the 100s. Once I get a Geforce 6800 it would probably be even higher with anti-aliasing.

Note: it depends on your CPU, if you want to have more than 100.

I had an AthlonXP 3200+ (Barton), a Gigabyte 6800 (SilentPipe), 1GB Corsair Ram and with the official Forceware I had only ~70 without Vsync. If you install the Omegadriver, it probably goes up. With this Omega, i had about 120 sometimes...for testing. because I use a BenQ TFT and have Vsync active all the time.

[View Forum Message](#) <> [Reply to Message](#)

Errr...the main thing affecting the ping is DISTANCE! The longer the distance, the longer it takes from electricity to move from your PC to the destination. The world doesn't end to the plug on your wall. Of course your ping will be higher when you try to play on servers that are located on faraway continents. Sure, other things affect ping, but with today's connections, distance is a key thing.

It's funny how many kids don't realize that you simply can't change the speed of light. Unless you create a wormhole linking your backyard to the opposite side of Earth, you're stuck with "bad"* pings to there. There's nothing our technology can do to make electricity travel faster than the speed of light.

*imagine though, that the signal from your PC can travel to the other side of the globe in some 100ms =1/10th of a second.

(Decided to post this rant when someone in CS:S wanted to know how to make his ping lower,

from 150 to 10 or so....then other players tossed out comments like "Aaah you need to edit some game files for that"...)

I just got the 6800 and I thought I'd boot up Renegade and see the difference. It's pretty much constant in 130 - 150 FPS now. The Renegade engine can't really do much further. My CPU is an Athlon XP 2600, and I have 1GB of memory. I'm also using the 81.85 nVIDIA drivers.
