hy im having a bit of a problem with my server.
i duno if this is the right place for it but...

when i run my server for around 15-20 mins its restarts its self.

its a dedicated server using brenbot 1.41
im running on a 1 mbs download and 256 kbs upload.
its a dsl.
the brandwidth is 75000 runing 12 players.

iv been told there is a patch to sort this out for use on a dsl modem.

but i do notknow were to get this. if u know this will work could u give me a link to the download
source.

or if u think his wont work is there any other way u can help me.

i know this is th wrong forum but is there any program to take wol ranking and show them on a
website? thx
thx. if there is any more info u need just ask.

Does this just happen with any map you use?

This probably isn't the problem but this happens to me sometimes when i run Server side maps
that i made, Sometimes I make a mistake while making a map which causing the Server to crash
while playing.

EX:Like a purchase zone that someone enters and crashes the server because the preset it was
set to didn't exist.

Just a small possibility.

Umm does anyone join the game between the 15-20 min.?
BTW RenStat records ranks to www.renstats.net
Get it at http://www.beaconpedestal.com/
