You could use a hex edator to edit renegade EXE and do whatever and it would be 100% legal!

Just thought I would let that out their.

=/ lol
 use
 reshacker

if you just want to modifie the form
but theres liek 90 forms =/

...

I'm really not sure what to say... Have you actually tried that?

Try_lee wrote on Mon, 21 November 2005 03:17I don't understand why this is so exciting.

Because someone has just heard about a thing called "hex editing" from his friend or brother or whatever, and probably realized that Renegade.exe too, can be edited. Cool eh? And additionally, if you post about it on forums, you think you look intelligent "haxx0r".

Of course, it's nothing new to over 80% of there people here, I bet...

Wouldn't you be better served hacking the dat file instead of the renegade.exe? I thought that was the application that starts Rengaurd, or Renegade if you don't use Rengaurd.

If you think of modifying the always.dat or the game.exe, forget playing with RG.

RG always checks the MD5 of the always.dat based on the original. The MD5 checksum is implemented in RG and cannot be changed. That means, RG doesnt create a new Checksum everytime it will be installed, it has it in its Code.

If you want to modify the game.exe, make it BEFORE installing RG. But I have zero Experience in this. All I can say, there are some cracked game.exe's (I'm NOT talking about simple NoCD Cracks) and if you use them, you will earn a Ban from the RG Network. I also dont know what will be transmitted while auto-banning, but I think it's more than just the serial. All I want to say is be careful by changing the game.exe.

If someone wants a NoCD Crack, I can upload one of mine which is way better (and more comfortable) than the crapy one from djlaptop.

First of all, yes you can edit Game.exe or anything else. Thats how the draw distance increaser was made. Editing a value somewhere.

second of all, ResHacker cant enhance Renegade in anyway. You can move some textbox's around.....wooo.

I can tell you that if you have a game.exe, always.dat, always.dbs or always2.dat that doesnt match one of the files RenGuard has in its database, renguard will block you.
The only approved always.dat files are the official dat files from each language version of renegade.
The approved always.dbs files are the same plus those included with Core Patch 1 (and when CP2 is added, those files will be approved too)
Same with always2.dat, the only approved one is the one from normal renegade (always2.dat is not language specific) and the CP1 version. The CP2 version will be approved too when its done.

As for game.exe, we approve the stock westwood exe plus a few different no-cd cracks (such as the djlaptop crack). We would probobly not approve any new game.exe files without a good reason and not without checking them throughly)

idjit626 i think if you talk about a hex editor you should see the DATA the game.EXE has

sorry about how big that is but i don't know how to make it smaller with photobucket

Just the kind of guy to hexedit the game. A person that cant resize an image before he uploads it....

UltraEdit is the best.
