A while back someone released a name exploit fix. (I actually asked this before, but now I can't find it, so I'm asking again.)
1. Where can I get it?
2. Does it work only for FDS or will it work for non-dedicated servers as well?
3. Anything else I should know about it? (Updates and such...)

1) It's now part of SSAOW 1.4
2) It only works for FDS AFAIK

The nickname exploit fix is in all scripts.dll versions since 2.1.3 (including the new SSAOW 1.4) and works for the windows FDS and both versions of the linux FDS.

What I am wondering is, does the fix in 2.2.2 block everything that SK's fix blocked? Or even more maybe? But I guess there is no IP ban in the Scripts version?

It supports the same things as SKs fix does.
No IP banning though.
